DentalCare Management Project

➤ Overview of project:

“Dental Care Management System” was developed to overcome the problems of the manual practice system. This software is supported to eliminate and in some cases reduce the difficulties encountered by this legacy system. Furthermore, this system is designed for the specific needs of the company to run the operations smoothly and efficiently. The application is minimized to avoid data entry errors. It also gives an error message if invalid data is entered. There is No formal knowledge required for the user to use the dental clinic management system.

So all this proves that it is easy to use. The dental clinic management system described above can result in an error-free, secure, reliable, and fast management system. This can help the user to focus on other activities instead of keeping records. Therefore, the system will help organizations make better use of their resources. Every organization, large or small, faces challenges in managing and managing information from doctors, dental clinics, exams, appointments, and appointments.

Each dental clinic management system has different requirements for dental clinics. that's how we design unique employee management systems tailored to your management needs. This is intended to support strategic planning and help ensure your organization is equipped with the right level of information and detail for your future goals. Plus, for busy executives who are always on the go, our systems are equipped with remote access capabilities so you can manage your workforce anytime, anywhere. The proposed system ultimately allows the user to better manage their resources.

➤ **Functional of project:**

1-provides the searching facilities based on various factors, such as patient, test, appointment

2-Dental care management system also manage the booking details online for test details and appointment details

3-Manage the information of doctor

4-Shows the information and description of the dental clinic, doctor

5-Editing, adding and updating of records is improved which results in proper resource management of dentalcare data

➤ **Non-Functional of project:**

1-Performance and scalability

2-Portability and Compatibility

3-Reliability ,Maintainability and Availability

4-Security
